- **What challenges did you encounter with this assignment, if any?**

It was clear to me.

- **What did you think about the requirements specification for this assignment?**

I think the requirements are very clear and understandable.

- **What challenges did you encounter with the tools?**

I didn't face any challenges, I used to use the same tools with 810 and 555 courses with Professor

Rowland; even though I am not well experienced in Python

- **Describe the criteria you used to determine that you had sufficient test cases, i.e. how did you know you were done?**

I wrote the test before the code which helped me to think about all the cases that might happen. Then I

tested all the cases I had come with. When all the tests passed I knew that I'm done.
